The Master of Information Management & Systems program at the UC Berkeley School of Information produces leaders who work at the intersection between technology, information, and people. Most students participate in a paid summer internship after their first year of the program to practice and manage skills and knowledge gained from first-year coursework. This knowledge includes Data Mining, Database Design, User Interface Design, Product Management, Information Organization & Retrieval, Natural Language Processing, Entrepreneurship, Behavioral Economics, and more.

For students serving internships with non-profits, government agencies, or NGOs in the U.S. or abroad, the School of Information provides grants of up to $6,000.
